TYROLIT

Use your machines with MoveSmart technology in the best possible way!

In a constantly changing and developing world, efficiency is becoming more and more important – even in the construction industry. With the MoveSmart Technology, TYROLIT machines are connected to the Internet for the very first time. The technology processes real-time machine data directly at the construction site and makes it available on various end-user devices. The cloud-based MoveSmart Technology was developed in collaboration with the Austrian start-up ToolSense and provides user and business owners with important machine and usage data, helping them to get the most out of their equipment. Because the more you know about your machines, the better you can use them. Machines of the latest generation are already equipped with IoT modules, older models can be retrofitted.

Plan and act smart - from anywhere

– Retrieve operating hours & error messages
– Carry out software updates
– Process service tickets
– Immediate help with troubleshooting
– Activate machine location
– All statistics in real time: running time, applications, contract details etc.
– Optimal deployment and fleet planning
– Machine status always up to date
– And much more!

Stay up to date:

Better planning, increased productivity, lower costs

– **Increased productivity**
The collected machine and user data allow for better and more efficient job planning.

– **Open platform**
Adding non TYROLIT- or adding non-IoT assets is possible and enables full control of your whole fleet.

– **Less downtimes**
The data-based job and maintenance planning minimises downtimes.

– **Targeted product development**
Machine development is even more user-oriented.

– **Location data**
In case of a breakdown, the nearest machine of your pool can be located in an instant. The same is valid for stolen machines.

– **Usage statistics**
MoveSmart offers information about the area of application and type of usage of the machine, which leads to a more efficient operation at the construction site.

– **Maintenance control**
Maintenance work and updates are done in due time and are easier to plan. Service appointments can be booked online and expiry dates of service contracts are always accessible.

– **Lower costs**
Costs are reduced through punctual services, better job planning, and on-site troubleshooting.

– **Increased machine safety**
Machines are constantly scanned for important updates and maintenance intervals can be planned right on time.

– **Online support**
In addition to the online error indication, user and safety manuals as well as certificates or other documents are conveniently available online.

– **Faster troubleshooting**
Error analysis and support via the app enable direct troubleshooting at the construction site. The collected data helps to identify and solve problems faster.

MoveSmart technology, for optimal deployment planning and maximum efficiency

Machine optimisation

Service & Tickets
– Management of the service contracts
– Access to error and event history
– Error detection and rectification*
– Handling of service requests and tickets

Business Features
– Individual company design
– API for data integration into existing operating software

Rights & User Management
– Creation of additional users
– Rights management and extended user management

Asset Management
– Inventory list
– Inventory of machines of third-party suppliers
– Construction site planning
– Calendar reservation
– Saving documents and certificates
– Advanced Rule Engine
– Access to dashboard
– Mass import of assets

Data
– GPS location detection*
– Access to telemetry data*
– Anti-theft protection*
– Various operating statistics*
– Download of collected machine data*

*Installed IoT module required

Service Management

Whether you use the MoveSmart web version or the app - you are always connected to our smart service. You can report and rectify faults directly from the construction site or book your service appointment conveniently online.

You can access your entire service and ticket overview with a single click. And, of course, we also answer your questions digitally as quickly as possible.
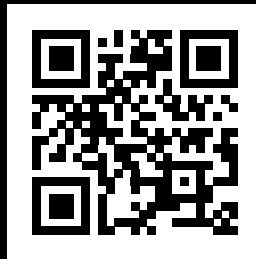

Get started!

Step 1:

Register on
www.movesmart.toolsense.io/signup

Step 2:

Get access to the web version via
