0 Introduction

0.1 Congratulations!

You have decided to purchase a tried and tested TYROLIT Hydrostress AG system and have thus acquired a highly sophisticated and reliable state-of-the-art unit.

Thanks to the emphasis we place on quality assurance, your TYROLIT Hydrostress AG system is another top-of-the-range Swiss product:

- High performance
- Reliable operation
- High portability
- Easy handling
- Low maintenance costs

Only original TYROLIT Hydrostress AG spare parts can guarantee quality and interchangeability.

In the case of neglected or inappropriate maintenance, we will be unable to accept the warranty commitment as specified in our terms of delivery.

Any repair work must be carried out by trained personnel only.

If you need more details about how to keep your TYROLIT Hydrostress AG system in perfect condition, please contact our after-sales service for further information.

We hope that working with your TYROLIT Hydrostress AG system will be a problem-free and fault-free experience.

TYROLIT Hydrostress AG

0.2 Validity of these Operating Instructions

This manual is only valid for the following system:

Drive Unit PPH20RR***

0.3 Standards

These Operating Instructions have been prepared in accordance with the CE Machinery Directive Appendix I and with the relevant standards in force at the time of printing.

0.4 Delimitation of the system

These Operating Instructions describe the use of the **Drive Unit PPH20RR*****.

1 Product description

1.1 Application

The Drive Unit PPH20RR*** has been designed as a component for the following concrete processing systems:

- Hydraulic wall saw systems
- Hydraulic diamond wire saw systems
- Hydraulic core drilling systems
- Hydraulic chainsaws

The applicable mandatory limitations on use and other parameters are contained in Chapter 1 "Technical data" 1.7, 1-4

1.2 Safety measures

Any use other than for the intended purpose (see Chapter 1.1, 1-1) constitutes abuse or misuse.

1.3 Operating instructions for connectable equipment

In order to ensure safety in the workplace and in danger areas, as well as the safe operation of connectable equipment, the relevant Operating Instructions must in all cases be followed.

1.4 Name plate

Fig. 1-1 Name plate

1.5 Information sign

Attached to the plastic hood is an information sign containing the following information:

- Hose connections
(For a description see "Chapter 5" 5.3.2.1,  5-2)
- Pressure stages
(For a description see "Chapter 5" 5.4.3,  5-8)
- Risk of frost
(For a description see "Chapter 6" 6.1.1,  6-2)
- Hydraulic oil
(For a description see "Chapter 6" 6.1.2.1,  6-2)

Fig. 1-2 Information sign

1.6 EC Declaration of Conformity

Description	Hydraulic drive unit
Type designation	Drive Unit PPH20RR***
Year of construction	2007

We declare under our own liability that this product complies with the following directives and standards:

1.6.0.1 Directive applied:

Machinery Directive 2006/42/EC
EC EMC Directive 89/336/EC
EC Low Voltage Directive 73/23/EC

1.6.0.2 Standards applied:

EN 12100-1 Safety of machinery – Basic concepts, general design
EN 12100-2 principles
EN 294 Safety of machinery – Safety distances to prevent upper limbs reaching danger areas
EN 349 Safety of machinery – Safety distances to avoid crushing of body parts
EN 982 Safety of machinery
Safety requirements of safety systems and their components - Hydraulics
EN 60204-1 Safety of machinery - Electrical equipment of machines

1.7 Technical data

1.7.1 Dimensions

Fig. 1-3 Dimensions

1.7.2 Weight

Operating weight 155 kg

1.7.3 Tyres

Wheel Ø 30 cm

Operating pressure 3 bar

1.8 Hydraulics

1.8.1 Main circuit

Main circuit 3 pumps

Flow rates can be set to 33 / 40 / 50 / 60 l/min., depending on the cutting tool speed required

Flow rates and pressures

Stage I	33 l/min	260 bar
Stage II	40 l/min	215 bar
Stage III	50 l/min	180 bar
Stage IV	60 l/min	150 bar

Same power in all stages

1.8.2 Feed circuits

Feed circuits: 1 pump

Two hydraulic feed outputs which can be regulated independently of each other, controlled using radio remote control.

1.8.3 Oil tank

Oil tank volume: 10 litres

Filter quality: 20 µm

1.8.4 Return oil filter

Type: Tank-mounted filter

1.8.5 Oil cooling

Oil cooler: Water / oil heat exchanger

1.8.6 Couplings and hoses

Plug-in couplings Type FD and FF, non-drip
Hoses Length 8m (filled with hydraulic oil)

1.8.7 Oil quality

TYROLIT Hydrostress AG recommends:

Hydraulic oil: HLP/ISO VG 46

1.9 Electrical equipment

Information

Electrical data are only valid for the installed loads
3 P / LNPE 400 VAC / 50 Hz

1.9.1 Voltage variations

For countries where different mains networks operate the following types are available:

Drive Unit PPH20RR***	200-220 V	50 Hz
Drive Unit PPH20RR***	380-420 V	50 Hz
Drive Unit PPH20RR***	200-240 V	60 Hz
Drive Unit PPH20RR***	420-480 V	60 Hz
Drive Unit PPH20RR***	380 V	60 Hz

Warning

A danger will arise if the Drive Unit PPH20RR* is operated with a different mains network voltage.**

The details on the name plate must correspond to the mains network values (voltage and frequency).

Damage may be caused to the unit if it is connected to a different voltage; there is also a risk of fire and personal injury.

1.9.2 Motor

Electric motor	water-cooled	
Power supply	3 P / LNPE 380 - 420 V / 50 Hz	
	420 - 480 V / 60 Hz	
Current consumption	200 - 220 V / 50 Hz	64 A
	380 - 420 V / 50 Hz	32 A
	200 - 240 V / 60 Hz	60 A
	420 - 480 V / 60 Hz	28 A
	380V	60 Hz
		35 A
Output	P1 20 kW / P2 17 kW	
Speed	at 50 Hz 2880 rpm	
	at 60 Hz 3480 rpm	

1.9.2.1 Motor protection

Thermal protection	Winding thermostat
Electrical protection	Thermal relay

1.9.2.2 Cooling

Water cooling	Cooling channels in the aluminium
Throughput of cooling water	min. 6 l/min at max. 25° C
Water connection	min. 2 bar, max. 6 bar

1.9.2.3 Protection class

IP 65

1.9.2.4 Internal control voltage (valve control)

24V / DC

1.9.2.5 Secondary socket

Connections 2 sockets 230V / 10A
with fault current tripping at 10 mA

1.10 Water

Pressure min. 2 bar to max. 6 bar
Quantity min. 6 l/min at max 25°C

1.11 Noise exposure (noise level)

Depending on the working environment and the connected device, the Drive Unit PPH20RR*** can produce high noise levels during operation.

**Danger****Noise danger**

When operating the PPH20RR* drive unit, the wearing of hearing protection is mandatory at all times.**

If this instruction is not followed irreparable hearing damage may result.

1.11.0.1 Noise level measurement

Noise level measured at the ear of the operator 0.5 m from the Drive Unit PPH20RR***; noise power level according to ISO 3744; drive unit only; highest value taken from all operating states at full load; mean values from three series of measurements.

Noise level 83 dB (A) noise power level 92 dB (A)

1.12 Scope of supply

- Drive Unit PPH20RR***
- Radio remote control
- Water purge pump
- Operating Instructions / Spare parts list

1.13 Country list for radio transmission frequency

Country	Frequency MHz	Country	Frequency MHz
Australia	434	Mexico	458
Belgium	434	New Zealand	434
Bolivia	434	Netherlands	434
Brazil	434	Norway	434
Brunei	434	Austria	434

2 Safety instructions

2.1 General

All persons who work on and with the Drive Unit PPH20RR*** have a duty to read and understand the Operating Instructions.

2.1.1 Observance of the safety instructions

The Drive Unit PPH20RR*** has been inspected before being shipped and is delivered in perfect condition. TYROLIT Hydrostress AG does not accept any liability for damage which is caused by failure to observe the instructions and information provided in the Operating Instructions. This applies in particular to:

- Damage caused by improper use and operator error.
- Damage caused by failure to observe safety-related information in the Operating Instructions or shown on the warning signs attached to the machine.
- Damage caused by defective or neglected maintenance work.

Independently performed conversions and alterations may affect safety and are not permitted.

2.2 General safety rules

2.2.1 Statutory provisions

The generally applicable national and local safety and accident prevention provisions and the supplementary operator regulations must be followed and complied with.

2.2.2 Inspection and maintenance obligation

The operator is under an obligation to use the Drive Unit PPH20RR*** only when it is in a perfect and undamaged condition. The maintenance intervals shown in the Operating Instructions must be adhered to without fail. Malfunctions and mechanical damage must be rectified without delay.

2.2.3 Spare parts

Only TYROLIT Hydrostress AG original spare parts may be used. Otherwise, damage can be caused to the Drive Unit PPH20RR*** or other property and may result in personal injury.

2.2.4 Power connections

The Drive Unit PPH20RR*** must be connected and coupled in accordance with the Operating Instructions.

2.3 Safety principles

2.3.1 Delimitation of the safety concept

The Drive Unit PPH20RR*** does not affect the safety concept of the connected systems, equipment and installations.

2.3.2 Safety elements

Protection from live electrical parts

All functional units containing parts which carry hazardous voltages are shock-protected by suitable covers.

2.3.3 Removal of protective devices

Protective devices may only be removed if the unit has been switched off, disconnected from the mains and is at standstill. Safety components, in particular, may only be removed and refitted by authorised personnel, see "Chapter 2" 2.4.1, 2-3.

Before switching the Drive Unit PPH20RR*** back on again, the safety elements must be checked to ensure correct operation.

2.3.4 Safety measures (organisational)

2.3.4.1 Product monitoring obligation

Operating personnel must notify changes in operational behaviour or safety-related components to a responsible person or the manufacturer, immediately.

2.3.4.2 Location of the Operating Instructions

A copy of the Operating Instructions must be available to staff at all times at the place of use of the equipment.

2.4 Responsibility

2.4.1 Authorised personnel

Work on or with the TYROLIT Hydrostress AG machines or systems may only be performed by authorised personnel. Personnel are considered by TYROLIT Hydrostress AG to be authorised if they meet the necessary training and know-how requirements and they have been assigned a precise functional role.

The personnel qualifications for the corresponding work are contained in the introduction under "General" of the respective chapters.

2.4.2 Manufacturer

TYROLIT Hydrostress AG or a company expressly nominated by TYROLIT Hydrostress AG is deemed to be the manufacturer of the products supplied by TYROLIT Hydrostress AG. Within the context of an integrated quality and safety control system, the manufacturer is entitled to request from the operator information about the products.

2.4.3 Operator (owner)

The operator named by TYROLIT Hydrostress AG is the primary, legal entity responsible for the correct use of the product and for the training and assignment of the authorised personnel. The operator sets out the mandatory skills and level of training of the authorised personnel for his company.

2.4.4 Operator (user)

User is the term employed by TYROLIT Hydrostress AG to designate a person who independently performs the following work:

- Sets up TYROLIT Hydrostress AG machines or systems for tasks according to the intended purpose.
- Performs tasks independently and monitors these.
- Locates malfunctions and initiates or performs troubleshooting.
- Carries out servicing and simple maintenance.
- Monitors the correct functioning of the safety devices.

2.4.5 Service engineer

Service engineer is a term used by TYROLIT Hydrostress AG to designate a person who independently performs the following work:

- Installs TYROLIT Hydrostress AG machines and systems and controls their correct application.
- Makes adjustments to machines and systems for which special access rights are required.
- Performs repairs, complex service work and maintenance work.

2.4.6 Qualification and training

2.4.6.1 Operator (owner)

- A technically trained person in a management position.
- Has relevant experience in personnel management and danger assessment.
- Has read and understood the "Safety instructions" chapter.

2.4.6.2 Operator (user)

- Has trained as a concrete cutting expert or has professional experience.
- Has received an introduction (basic training) to the operation of the TYROLIT Hydrostress AG machines and systems from a service engineer.
- Has read and understood Chapter 2 "Safety instructions".

2.4.6.3 Service engineer

- Has specialist professional training (mechanical / electrotechnical).
- Has attended specialist courses at TYROLIT Hydrostress AG.
- Has read and understood the "Safety instructions" chapter.

2.5 Generally applicable warnings of residual dangers

Danger

Electric shock due to defective electronic equipment.

The electrotechnical equipment must be checked prior to each use and from time to time during prolonged use. Defective parts, such as e.g. cables and plugs, must be replaced immediately in the de-energized state by electrotechnically trained personnel.

Failure to comply with this regulation may lead to serious physical injury or death. Secondary damage such as fires may also occur.

Warning

Danger of allergic reactions if skin comes into contact with hydraulic oil.

Persons who have an allergic reaction to hydraulic oil must wear protective gloves and goggles when carrying out work where they come into contact with hydraulic oil. Any areas of the skin affected must be rinsed immediately with copious amounts of water.

Failure to observe this regulation may result in allergic reactions or injury to the eyes.

3 Design and function

3.1 Design

Fig. 3-1 Main components

- | | |
|--------------------------------------|--------------------------|
| 1 Hydraulic unit | 10 Pump assembly |
| 2 Antenna | 11 Oil level indicator |
| 3 Oil cooler | 12 Radio receiver |
| 4 Pressure gauge | 13 Electrical connection |

3.3 Radio remote control

3.3.1 Design

Fig. 3-5 Remote controller

- 1 Controls
- 2 Plastic housing

3.3.1.1 Accessories

Fig. 3-6 Accessories

- 1 2x interchangeable battery
- 2 Battery charger
- 3 Cable insert
- 4 Battery insert

Warning

The battery charger is exclusively for recharging the interchangeable re-chargeable battery. The battery insert and the cable insert must not be inserted.

3.3.2 Function

The radio remote control allows a secure, simple and mobile method of working. The operator can at all times be in a position where he has a full view of the unit during operation.

4 Controls and displays

4.1 Controls

Fig. 4-1 Controls

- | | |
|---------------------------------|------------------------------------------|
| 1 Water and hydraulic couplings | 6 EMERG. STOP |
| 2 Safety socket | 7 Water valve |
| 3 Schuko socket | 8 Suspension shackle |
| 4 Forward/reverse switch | 9 Remote controller |
| 5 Device protective switch | 10 Cable connection of remote controller |

4.1.1 Radio remote control

Fig. 4-2 Radio remote control

- | | |
|--------------------------------|----------------------------------|
| 1 Locking switch | 7 Pressure stage selector switch |
| 2 Pilot lamp (radio & battery) | 8 Water In / Out |
| 3 EMERG. STOP | 9 Main motor potentiometer |
| 4 Main switch of drive unit | 10 Main motor On / Off |
| 5 Start switch | 11 Feed motor potentiometer |
| 6 Feed joystick | |

4.2 Electric controls

4.2.1 Secondary sockets

The Drive Unit PPH20RR*** is equipped with 2 x 230V / 10 A secondary sockets with fault current tripping at 10 mA.

The secondary sockets may only be used with a neutral conductor.

Fig. 4-3 Secondary sockets

- 1 On / Off switch
- 2 Test button

- 3 Safety socket
- 4 Schuko socket

4.2.1.1 Safety socket

The safety socket has integral residual current protection and is the active personnel safety device. The operating principle of the safety socket is the same as that of a residual current circuit breaker.

Information

Equipment on which the safety socket interrupts the power circuit during operation is defective and must be checked by an electrical engineer and, if necessary, repaired.

Monitoring

The safety socket must be checked monthly during operation. The check can be performed with or without the plug inserted, as follows:

- The switch must be in the (I) position
- Press the Test button
 - the switch must switch off (0 position)
- Push the switch back into the (I) position

4.2.1.2 Schuko socket

The Schuko socket is connected and protected via the safety socket.

4.2.2 Forward/reverse switch

If the phase position of the power supply to the site is wrong, the phases can be turned.

4.2.3 Device protective switch

The device protective switch protects the secondary sockets and thereby protects the devices connected to the sockets.

The device switch interrupts the circuit in the event of a current surge (more than 13A). The circuit is restored by pressing the device switch.

4.2.4 Cable connection of remote controller

The radio remote control can be connected to the Drive Unit PPH20RR*** power supply by means of the cable insert.

4.2.5 EMERGENCY STOP

Pressing the EMERGENCY STOP button switches the system off and prevents the system being accidentally switched on again.

Fig. 4-4 EMERGENCY STOP

- 1 EMERG. STOP on the Drive Unit PPH20RR***
- 2 EMERG. STOP on the radio remote control

4.3 Displays

Fig. 4-5 Displays

- | | |
|---------------------------------|-------------------------------------|
| 1 Hour counter | 4 Pressure gauge of main motor |
| 2 Pilot lamp (radio & battery) | 5 Oil level indicator |
| 3 Pressure gauge of feed motors | 6 Optional: Softstarter LED display |

4.3.1 Hour counter

The hour counter allows for precise observance of the service intervals.

Fig. 4-6 Hour counter

4.3.2 Pilot lamp (radio & battery)

Fig. 4-7 LED pilot lamp

The LED pilot lamp on the radio remote control flashes green to indicate operational readiness. When the battery voltage becomes low, the colour changes from green to red.

4.3.3 Pressure gauge

Fig. 4-8 Pressure gauge

- 1 Pressure gauge of main motor (0 bar to 400 bar)
- 2 Pressure gauge of feed motors (0 bar to 250 bar)

4.3.4 Oil level indicator

Fig. 4-9 Oil level indicator

Information

The quantity of oil between oil MIN and oil MAX is 1.5 litres.

Different types of hydraulic oil should not be mixed together, otherwise the oil will age prematurely.

Recommended hydraulic oil: HLP / ISO VG 46

5 Operation

5.1 Personnel qualifications

The Drive Unit PPH20RR*** must not be operated by unauthorised personnel. Personnel are only authorised if they meet the following requirements.

- Have trained as a concrete cutting expert or have professional experience.
- Have received an introduction (basic training) to the operation of the Drive Unit PPH20RR*** from a service engineer.
- Have read and understood chapter 2 "Safety instructions".

5.2 System requirements

Warning

A danger will arise if the Drive Unit PPH20RR* is operated with a different mains network voltage.**

The details on the name plate must correspond to the mains network values (voltage and frequency).

The system may be damaged by connecting it to a different voltage. There is also a danger of fire and injury.

5.2.1 Connectable equipment

All hydraulic units that are designed for the pressure and delivery volume of the Drive Unit PPH20RR*** (see "Chapter 1" 1.8, 1-5).

Information

The Drive Unit PPH20RR*** is one of a series of drive products available from TYROLIT Hydrostress AG.

In order to allow expansion of your Drive Unit PPH20RR*** with suitable devices to create an hydraulic saw or drilling system with optimum performance, please talk to TYROLIT Hydrostress AG.

5.3 Preparatory operations

5.3.1 Visual inspection

Before starting work always complete the following visual inspections:

- Is the power supply earthed, fitted with a neutral conductor and a residual current circuit breaker?
- Is the mains protected correctly?

Design	Protection	Cable cross section
380 - 420 V / 50Hz	32 A	5x6 mm ² (from 25-50 m 5x10 mm ²)
420 - 480 V / 60 Hz	32 A	5x6 mm ² (from 25-50 m 5x10 mm ²)
380 V / 60 Hz	32 A	5x6 mm ² (from 25-50 m 5x10 mm ²)
200 - 220 V / 50 Hz	63 A	5x10 mm ² (from 25-50 m 5x16 mm ²)
200 - 240 V / 60 Hz	63 A	5x10 mm ² (from 25-50 m 5x16 mm ²)

- Is the water line properly connected to the Drive Unit PPH20RR***?

Information
Ensure that the water supply is not interrupted while work is in progress.

- Is there sufficient oil in the Drive Unit PPH20RR***?
- Is there any damage to cables or plugs?
- Has the EMERGENCY STOP been reset?

5.3.2 Connecting the Drive Unit PPH20RR***

5.3.2.1 Connecting the hoses

Warning
Danger from uncontrolled movements and uncontrolled escape of oil.
Never connect or disconnect hoses while the drive unit is running.
Failure to observe this regulation may result in cut wounds or injury to body parts as well as damage to property.

5.3.2.2 Hose connections

Fig. 5-1 Hose connections

- 1 Couplings of main motor
- 2 Water connection
- 3 Couplings of feed motor 1
- 4 Couplings of feed motor 2
- 5 Leak-oil connection (hydraulic motor Gr.3)

Proceed as follows:

- Visual inspection
 - Check:
 - Oil leaks from hoses and couplings
 - Couplings for damage and contamination
 - Hoses for damage
- Push the hose coupling on to its counterpart until you hear it "click"
- Twist the locking ring of the coupling

Information

If hoses cannot be connected or this cannot be done easily, they are under pressure. Release pressure in hoses via the pressure relief device. Release pressure in the Drive Unit PPH20RR***, see "Chapter 5" 5.3.2.3, 5-3.

Never use force to connect couplings!

5.3.2.3 Release pressure in the Drive Unit PPH20RR***

Proceed as follows:

- Turn the forward/reverse switch on the Drive Unit PPH20RR*** to position 1 (2).
- Switch on the radio remote control by means of the Start switch.
- Press the main switch once, on the radio remote control.
- Briefly push the feed joystick in all directions.

5.3.3 Radio remote control provision

Information

The transmitter and receiver are a pair of matched units. They cannot be used with other devices.

5.3.3.1 Power sources

The radio remote control can be operated using a rechargeable battery, disposable battery or via cable.

Rechargeable battery operation:

The interchangeable rechargeable battery is inserted at the housing base. The operating period with a fully charged battery is approximately 12 hours. The reception distance is 25 m.

Cable operation:

The cable insert included in the scope of supply allows connection of the remote controller to the Drive Unit PPH20RR***. The cable length is 10 m. Cable operation makes it possible to work in areas where radio operation is not allowed (e.g. hospitals).

Fig. 5-2 Cable operation

Information

When working with the cable connection, all control signals are transmitted via the electric cable.

Battery operation:

The battery insert included in the scope of supply allows operation with three 1.5 V AA batteries. The reception distance is 25 m.

5.3.4 EMERGENCY STOP

In danger situations the EMERGENCY STOP button must be pressed immediately.

Fig. 5-3 EMERGENCY STOP

- 1 EMERG. STOP on the Drive Unit PPH20RR***
- 2 EMERG. STOP on the radio remote control

Deactivating EMERGENCY STOP

Information

If the EMERG. STOP is activated on the radio remote control, the LED pilot lamp flashes quickly.

Fig. 5-4 Deactivating EMERGENCY STOP

Proceed as follows:

- The following controls must be moved into the 0 position:
 - Feed joystick (3)
 - Main motor On/Off (5)
- Turn the EMERG. STOP button (1 / 2) clockwise.
- Push the main switch (4) to the ON position.

5.4 Working

5.4.1 Starting the Drive Unit PPH20RR***

Information

The Drive Unit PPH20RR*** should only be switched on in a level and upright position. If the surface has an incline, secure the drive unit to prevent rolling away.

Proceed as follows:

- Check that the EMERG. STOP buttons on the radio remote control and on the Drive Unit PPH20RR*** are deactivated.
- Move the controls shown below on the remote controller into the 0 position.

Fig. 5-5 0 position

- 1 Start switch
- 2 Feed joystick
- 3 Main motor On/Off

- Turn the forward/reverse switch on the Drive Unit PPH20RR*** to position 1.
- Switch on the radio remote control by means of the Start switch.
 - Pilot lamp lights up red, first of all
 - A signal tone sounds simultaneously
 - Pilot lamp lights up green
 - Second signal tone sounds
 - Pilot lamp flashes green
- Push the main switch on the radio remote control twice, into the ON position.
 - The electric motor starts

**Information**

If the electric motor does not start, the forward/reverse switch on the Drive Unit PPH20RR*** must be turned to position 2.
In drive units with a softstarter, the LED display flashes red on the control cabinet.

**Information**

If the Drive Unit PPH20RR*** is switched off after the electric motor has once been started up, in order to start up again it is only necessary to press the main switch on the remote controller just once more.

- Press the Water On/Off button on the remote controller to I
- Open the water valve on the Drive Unit PPH20RR***
 - water emerges from the cutting tool
- The Drive Unit PPH20RR*** is ready for operation

5.4.2 Soft start

The Drive Unit PPH20RR*** provides the option of a soft start.
The soft start is used mainly for diamond wire sawing.

Proceed as follows

- Start the Drive Unit PPH20RR***, see "Chapter 5" 5.4.1,  5-6
- Turn the main motor potentiometer to the 0 position
- Select the desired pressure stage, see "Chapter 5", 5.4.3,  5-8
- Turn the main motor potentiometer slowly to 100% power

5.4.3 Selecting the pressure stage

Once the Drive Unit PPH20RR*** has been started properly, you can select the pressure stage.

Fig. 5-6 Selecting the pressure stage

Proceed as follows

- Set the pressure stage selector switch to the desired pressure stage and turn the main motor potentiometer from 0 to 100%.

Information

The pressure stages can be freely changed and selected during the work operation. When changing the pressure stage, the cutting tools should not be under load. To ensure the optimal tool speeds, the data for the relevant connected devices must be taken into consideration.

5.4.4 Power control

The power of the main motor and the feed motor is controlled via the potentiometer.

Fig. 5-7 Potentiometers

- 1 Feed motor potentiometer
- 2 Main motor potentiometer

5.4.5 Feed movements

The feed motors for the travel motion and the swivelling can only be controlled individually by means of the feed joystick.

Fig. 5-8 Feed

- A Travel feed
- B Swivel feed

5.4.6 Feed locking

So that the joystick does not have to be held in position during the travel feed motion, the travel feed can be locked.

Proceed as follows

- Push the joystick in the desired travel direction and, at the same time, press the locking switch.
- When the joystick and the locking button are released, the feed is locked.

Information

In order to release the feed lock, move the joystick slightly in any desired direction.

5.4.7 Shutting down the Drive Unit PPH20RR***

Proceed as follows

- Switch off the electric motor (main switch of radio remote control)
- Shut off the cooling water (Water On/Off button of radio remote control)
- Close the water valve on the Drive Unit PPH20RR***
- Turn the Start switch on the radio remote control into the 0 position
- Turn the forward/reverse switch on the Drive Unit PPH20RR*** to the 0 position

Information

Only shut down the Drive Unit PPH20RR*** with the EMERGENCY STOP in a genuine emergency.

5.5 After the work

Proceed as follows:

- Unplug the mains plug (Drive Unit PPH20RR***)
- Uncouple the water supply on the Drive Unit PPH20RR***
- Open the water valve on the Drive Unit PPH20RR***
- Blow out the water from all the lines (purge pump)
- Uncouple the hydraulic hoses
- Clean the Drive Unit PPH20RR*** with water

Information

In order to prevent frost damage, if there is a risk of frost the entire water system must be emptied and blown out upon finishing work or prior to extended breaks in the work.

6 Servicing

6.1 Servicing and maintenance table

		Before each start-up	Upon completion of work	Weekly	Annually	In the event of malfunction	In the event of damage
Hydraulic system	Hydraulic hose inspection (leakproof condition / cleanliness)	X	X			X	X
	Coupling inspection (leakproof condition / cleanliness)	X	X			X	X
	Check oil level, see "Chapter 4" 4.3.4, 4-5	X	X			X	
	Replace hydraulic oil, see "Chapter 6" 6.1.2, 6-2					X	
Water economy	Water line (leakproof condition / cleanliness)	X	X			X	X
	If there is a risk of frost, blow out the water, see "Chapter 6" 6.1.1, 6-2		X				
Mechanical	Retighten accessible screws and nuts			X		X	
Major service First service after 100 operating hours After every 200 operating hours, thereafter	May only be carried out by TYROLIT Hydrostress AG or an authorised representative						

6.1.1 Blowing out the water

Information	
In order to prevent damage from frost-cracks, if there is a risk of frost or prior to extended breaks in work the cooling water must be blown out of the system. Use the TYROLIT purge pump No. 10982667.	

6.1.2 Oil change

6.1.2.1 Oil quality

TYROLIT Hydrostress AG recommends:

Hydraulic oil: HLP / ISO VG 46

Other hydraulic oils can be used if they comply with the following specifications:

Pour point:	-42°C
Viscosity index:	170
Viscosity class:	HLP VG 46 or ISO 3498 HV 46
Wear-protection according to DIN 51524 Part 3 (HV46)	

Information	
Different types of hydraulic oil should not be mixed together, otherwise the oil will age prematurely.	

6.1.2.2 Replacing hydraulic oil

In order to replace the hydraulic oil you will need:

- A collecting pan for the used hydraulic oil with a capacity of approx. 15 litres
- Open-ended spanner, size across flats 18 mm for the oil drain plug
- Approx. 10 litres of hydraulic oil

Fig. 6-1 Replacing hydraulic oil

1 Oil drain plug

Proceed as follows

- Place the collecting pan below the oil drain plug (1)
- Open tank cover
- Remove oil drain plug (1)
- Drain hydraulic oil completely
- Screw in oil drain plug (1)
- Fill tank with new hydraulic oil
- Bleeding the system
- Close the tank cover
- Dispose of waste hydraulic oil in accordance with local regulations

Bleeding the system

Information

Air must be bled from the system whenever the tank has been completely emptied and refilled.

Proceed as follows

- Open tank cover
- Fill oil to maximum mark
- Do not refit the tank cover, yet
- Short-circuit the main circuit with hose
- Start the Drive Unit PPH20RR***, see "Chapter 5" 5.4.1,  5-6
- Select the pressure stage 4, see "Chapter 5" 5.4.3,  5-8
- Allow the Drive Unit PPH20RR*** to run for a maximum of 5 seconds
- Switch off the Drive Unit PPH20RR***, see "Chapter 5" 5.4.7,  5-10
- Wait for 1 minute
- Repeat the start-up and shutdown process three times
- Check the oil level and top up the hydraulic oil as necessary
- Fit tank cover
- The system is now free of air

7 Corrective maintenance

7.1 Troubleshooting

The following table will help you to narrow down and rectify the source of the fault.

Fault	Possible cause	Solution
Drive Unit PPH20RR*** does not run, although the mains cable is connected	Forward/reverse switch in wrong position	see "Chapter 5" 5.4.1, 5-6
	Emergency stop has been activated	Release emergency Stop, see "Chapter 5" 5.3.4, 5-5
	Softstarter has switched drive unit off because: -Overtoltage as a result of seized rotor, red LED in control cabinet flashes 5x	Turn forward/reverse switch to "0-position" and wait until fan is no longer audible, then restart. In event of repeated failure, contact TYROLIT Hydrostress AG Customer Service
	No voltage at drive unit because:	
	Automatic circuit breaker in electric controller has tripped	Reset automatic circuit breaker
	Mains cable is defective	Replace the mains cable
	No voltage at the power supply (building site)	Check power supply
	Power supply phases incorrectly connected	Check power supply
	Phase missing	Check power supply
	Remote controller not switched on or controls in wrong position	see "Chapter 5" 5.4.1, 5-6
No radio connection	Test with cable insert	

Fault	Possible cause	Solution
Drive unit starts up, but then switches off again	Fuse of building site power supply trips	- Fuse protection too weak - Change power supply
	Incorrect voltage	The details on the name plate must correspond to the mains network values (voltage and frequency).
	Softstarter has switched drive unit off because: -Overtoltage in bypass mode, red LED in control cabinet flashes 8x -Rotor acceleration is terminated after 1 second, red LED in control cabinet flashes 6x	Turn forward/reverse switch to "0-position" and wait until fan is no longer audible, then restart. In event of repeated failure, contact TYROLIT Hydrostress AG Customer Service
No power, although electric motor is running and valves are open	Motor runs in wrong direction	Change direction of rotation with forward/reverse switch For drive unit with monitoring Inform TYROLIT Hydrostress AG after-sales service
	Defective pump	Have pump replaced by TYROLIT Hydrostress AG or an authorised representative
	Defective toothed belt	Have toothed belt replaced by TYROLIT Hydrostress AG or an authorised representative
The hydraulic oil is cloudy, light in colour and the tank overflows	Defective oil cooler	Inform TYROLIT Hydrostress AG after-sales service Warning: Do not continue operating the unit, otherwise hydraulic elements could be damaged
Coupling leaks	- Defective seal - Defective coupling	- Replace seal - Replace coupling

Fault	Possible cause	Solution
<p>The drive unit stops suddenly</p>	<p>Power supply interrupted because electric motor or thermal relay has overheated.</p> <p>Reasons: - Undervoltage at the power supply - Overvoltage at the power supply - Cross section of power supply cable too small - Water supply not correct</p>	<p>Check power supply see "Chapter 1" 1.9.1, 1-6</p> <p>Check power supply see "Chapter 1" 1.9.1, 1-6 Use mains cable with correct cross section, see "Chapter 5" 5.3.1, 5-2</p> <p>Check water circuit see "Chapter 1" 1.10, 1-7</p>
	<p>Defective plug connection</p>	<p>Check plug connection</p>
	<p>No radio connection</p>	<p>- Replace the battery - Work with cable insert</p>
	<p>Softstarter has switched drive unit off because: -Overheating in control electronics, red LED in control cabinet flashes 7x -Phase unbalance, red LED in control cabinet flashes 9x</p>	<p>Turn forward/reverse switch to "0-position" and wait until fan is no longer audible, then restart.</p> <p>In event of repeated failure, contact TYROLIT Hydrostress AG Customer Service</p>
	<p>Main motor potentiometer does not work</p>	<p>Defective potentiometer</p>
<p>Defective proportional valve</p>		<p>Inform TYROLIT Hydrostress AG after-sales service</p>
<p>Defective pump</p>		<p>Inform TYROLIT Hydrostress AG after-sales service</p>
<p>No pressure build-up in feed circuit</p>	<p>Defective potentiometer</p>	<p>Inform TYROLIT Hydrostress AG after-sales service</p>
	<p>Defective proportional valve</p>	<p>Inform TYROLIT Hydrostress AG after-sales service</p>
	<p>Defective pump</p>	<p>Inform TYROLIT Hydrostress AG after-sales service</p>

Fault	Possible cause	Solution
No water emerging	Water line is blocked	Clean the water line
	Water valve on feed line is closed	Open water valve
	Insufficient water pressure	Check water circuit see "Chapter 1" 1.10, 1-7
	Defective water valve	Inform TYROLIT Hydrostress AG after-sales service
	Water filter is blocked	Clean the filter or inform TYROLIT Hydrostress AG after sales service

If you are unable to remedy a fault, please call our service centre (see manufacturer's address on the reverse of the title page).

To guarantee a rapid and professional solution to the problem, it is important that you have prepared as follows before calling:

- Try to describe the fault as accurately as possible
- Note the type and index designation of your unit (name plate)
- Have the Operating Instructions close to hand

Fig. 7-1 Name plate

7.2 Storage

The Drive Unit PPH20RR*** consists partially of material which can corrode. If you take the unit out of service for an extended period, proceed as follows:

- Blow out the water from the water lines
- Lightly oil the unit
- Store in a dry location

8 Transport

8.1 Transport

The Drive Unit PPH20RR*** is a high-quality, technical device. Protect it against transport damage:

- Do not place any parts on or against the Drive Unit PPH20RR***
- Protect the Drive Unit PPH20RR*** from impacts
- The Drive Unit PPH20RR*** must be secured against rolling away during transport

8.2 Safety instructions

It is essential to observe the following safety instructions, especially in relation to taking the Drive Unit PPH20RR*** out of service.

Danger

Danger from incorrect crane transport

**Crane transport should only be carried out using the crane shackles provided.
Only undertake crane transport with serviceable building and mobile cranes.**

Failure to observe this regulation may lead to serious physical injury, possibly even death, and to property damage.

Warning

Danger from the lifting of heavy loads.

Units which weight more than 30 kg must not be lifted without suitable equipment.

For transport, use the handles provided. Always keep handles clean and free of grease.

Failure to adhere to this regulation may result in physical injury and damage to property.

8.3 Crane shackles and transport handles

Fig. 8-1 Crane shackles and transport handles

- 1 Crane shackles
- 2 Transport handles with hose bracket

Danger

Danger of falling parts.

When crane transport is used, the Drive Unit PPH20RR* must be transported alone, without the radio remote control and hoses.**

Failure to observe this regulation may lead to serious physical injury, possibly even death, and to property damage.

9 Disposal

9.1 General

The operator can recycle or dispose of the Drive Unit PPH20RR*** himself provided that he observes the statutory provisions. In order to dismantle the unit correctly and to properly separate the materials, some knowledge of mechanical procedures and knowledge about the differentiation of waste materials is necessary.

Before proceeding, first of all read Chapter 2 "Safety instructions", 2-1 in these Operating Instructions. Be sure also to observe all the danger information given here and follow the instructions on how to prevent personal injury and damage to property.

9.1.1 Safety instructions

It is essential to observe the following safety instructions, especially in relation to disposal of the Drive Unit PPH20RR***.

Danger

Danger of falling heavy parts.

When performing the types of work described in this chapter, it is absolutely essential to wear the following personal protective equipment: goggles, protective gloves and safety shoes.

It is essential to ensure that the work instructions and procedures described in this safety manual are followed.

Failure to observe this regulation may lead to serious physical injury, possibly even death, and to property damage.

9.1.2 Personnel qualifications

Personnel who carry out the work described in this chapter must meet the following conditions:

- Have read and understood the safety instructions in "Chapter 2".
- Have completed their technical training (mechanical/electrotechnical) and are in a position to differentiate the various material groups.

9.2 Disposal regulations

The usual national and regional regulations and directives must be observed when disposing of the Drive Unit PPH20RR***.

9.3 Disposal of the Drive Unit PPH20RR***

To allow proper disposal, the components of the Drive Unit PPH20RR*** must be dismantled. This is performed by the client's personnel.

The dismantled parts of the device are sorted by material type and sent separately to the appropriate collection points. Ensure, above all, that the following parts are correctly disposed of.

The Drive Unit PPH20RR* consists of the following materials:**

Cast aluminium	Rolled aluminium products
Copper	Steel
Rubber	Rubber / nylon fabric
Synthetic grease	Hydraulic oil
Plastic
